

CLOUD & INFRASTRUCTURE

Azure & Cloud Operations

Separate the cloud resources your business consumes from the expertise needed to run them.

Understand your workloads, operational responsibilities and cloud expenditure before agreeing a management plan.

A useful starting point for

Businesses running Azure workloads, planning a migration or seeking clearer ownership of cloud operations.

What we can scope

- Assess workloads, dependencies, access and operational risks.
- Define monitoring, maintenance and issue-escalation responsibilities.
- Review backup requirements and recovery priorities.
- Review consumption, capacity and cost-allocation requirements.
- Document routine changes, approvals and management reporting.

Your written quote confirms the selected inclusions.

Understand the proposal**Cloud consumption**

Compute, storage, networking and other resource charges vary with configuration and usage.

Cloud management

An agreed service fee covers the named workloads and operational activities in your proposal.

Engineering projects

Migrations, major redesigns and excluded changes are quoted and approved separately.

Clear expectations

- A management fee does not fix the underlying Azure consumption bill or guarantee that usage stays within a budget.
- Coverage, service hours, recovery arrangements and dependencies are confirmed for each environment.
- Your written scope identifies included activities and the approval process for additional engineering.

For your first conversation

- Workload inventory and application owners
- Recent usage summaries with sensitive information removed
- Operating hours, recovery priorities and expected growth

A summary is enough to start. Do not send passwords, recovery codes or access credentials.
