

CONNECT & PROTECT

Networks, Firewalls & Connectivity

Plan business connectivity, network access and site coverage together.

Create a clearer view of how staff, guests and business devices connect and who manages each part.

A useful starting point for

Businesses opening a site, improving Wi-Fi, reviewing a firewall or investigating recurring connectivity problems.

What we can scope

- Assess site layout, coverage, capacity and connected devices.
- Plan structured cabling, switching and wireless access.
- Review firewall policies and network-segmentation requirements.
- Assess business connectivity and available failover options.
- Agree installation tests, network documentation and operational handover.

Your written quote confirms the selected inclusions.

Understand the proposal**Connectivity**

Provider services, access speeds, availability and contract terms are confirmed for each site.

Equipment & subscriptions

Firewalls, switches, access points and security subscriptions are specified in the quote.

Management & projects

Recurring administration is separated from installation, cabling and major changes.

Clear expectations

- Coverage, installation requirements and connectivity options depend on a site assessment and provider availability.
- The proposal confirms firewall management, subscription renewals and the escalation route for carrier faults.
- Power, upstream connectivity and third-party services remain dependencies of the overall solution.

For your first conversation

- Site address, floor plan and user/device counts
- Existing connection, firewall and wireless details
- Known coverage problems and business-critical applications

A summary is enough to start. Do not send passwords, recovery codes or access credentials.
